

Ethereum Training: Hands-on Ethereum Development Bootcamp

Course Summary

Description

This course is designed for programmers and developers who want to take a comprehensive deep dive in writing smart contracts and building applications that interact with them. This course provides detailed overviews of Ethereum, smart contracts, and the development language, Solidity. The student will be exposed to Ethereum's adaptable feature set which allows the developer to design decentralized applications for countless applications. Students will also participate in hands-on programming lab sessions to learn, develop, and advance their skills in Ethereum development. The Ethereum Development Training Course is designed for those seeking an in-depth understanding and development experience of the Ethereum Blockchain platform. Students will participate in approximately 50% programming lab time providing practical experience, enhancing their knowledge and existing skill set. Due to the technical programming lab content covered in this course, it is not recommended for those without programming knowledge and experience. The Certified Blockchain Developer Ethereum exam is included with class. Those who attend the Ethereum Development course and pass the exam certification will have a demonstrated knowledge of: An excellent overall understanding of the Ethereum architecture and Solidity language. An excellent overall understanding of the Ethereum architecture and Solidity language. All functional components (including smart contracts) required to develop an Ethereum Blockchain. The understanding of how to instantiate an Ethereum application on the network. An in-depth understanding of how transactions are created and implemented on an Ethereum network.

Topics

- Blockchain and Smart Contract Basics
- Smart Contract Programming Basics
- Understanding Decentralized Information and Web3

Audience

Target Course Audience Include:

- Programmers
- Application Developers
- System Architects
- Network Architects
- Network Security Architects
- IT Professionals w/programming experience

Prerequisites

Absolutely Necessary: Basic knowledge in JavaScript / HTML, Recommended: Basic knowledge in C ++ / Java, Data types, Basic knowledge with git repositories

Duration

Three days

Ethereum Training: Hands-on Ethereum Development Bootcamp

Course Outline

- I. **Blockchain and Smart Contract Basics**
 - A. What is Blockchain and how does it work?
 - B. Centralized vs. Decentralized vs. Distributed
 - C. Blockchain vs. Databases
 - D. Bitcoin vs Ethereum
 - E. What are Smart Contracts?
 - F. How are Smart Contracts used?
- II. **Smart Contract Programming Basics**
 - A. Advantages and Drawbacks of Smart Contracts
 - B. Layer 1 vs. Layer 2
 - C. High-Level Language vs. Low-Level
 - D. Languages in Comparison Solidity, Vyper, others
 - E. Smart Contracts with Solidity
 - F. The Layout of a Solidity File
 - Lab Tasks (Lab 1)
 - Types of Variables in Solidity
 - Function/Variable Visibility
 - Smart Contract Constructors
 - Setter- and Getter-Functions
- III. **Understanding Decentralized Information and Web3**
 - A. Blockchain Access structures and Architectures
 1. Remote Blockchain Nodes vs. Local Blockchain Nodes
 - B. Blockchain Access vs. centralized RESTful API
 - C. Understanding Web3.js API
 - D. Understanding Transactions and Consensus
 - E. Private Keys, Public Keys and Signatures
 - F. Understanding privacy on public Blockchains
 - G. Understanding the architecture of KeyStore's such as MetaMask or MIST
 - Lab Tasks (Lab 2 – Ropsten Test-Ether and MetaMask)
 - Installing and Configuring MetaMask
 - Obtaining Ropsten (or Testnet) Ether
 - Tracing Ether through Block-Explorers
 - Understanding Infura
 - H. Basics of Ethereum and the EVM
 1. Ethereum Denominations
 2. Understanding EVM and the ABI Interface
 3. Calls vs. Transactions
 4. Concurrency and Events
 5. Use cases of Events
 - Lab Tasks (Lab 3 Web3JS Operations + Lab 4 Events)
 - Install and Use Ganache
 - Work with Web3.js
 - Work with Infura
 - Define Events
 - Listen and React to Events
 - I. Solidity Advanced: Modifiers, Mappings, Structs and Inheritance
 1. Understanding Functions, Mappings and Structs
 2. When to use Modifiers
 3. Libraries vs. Inheritance

- Lab Tasks (Lab 5 Modifiers, 6 Mappings and Structs, Lab 7 Inheritance)
 - Understand and use Modifiers
 - Add Mappings and Structs
 - Use Inheritance
 - Use Inheritance to increase auditability
- J. Understanding Deployment and Costs
 1. Understand Development and Deployment Cycles
 2. Understanding Solidity Compilation and Deployment
 3. Gas and Gas-Costs
 4. Upgradeability and Data Migration Techniques

Ethereum Training: Hands-on Ethereum Development Bootcamp

Course Outline(cont.)

- 5. Understand the moving Parts: Compiler, Blockchain, API, KeyStore
 - Lab Tasks (Lab 8 Deployment, Lab 9 Tie it together)
 - Changing from strings to bytes (save gas)
 - Deploy using Ropsten Test-Ether
 - Understand the difference when using a real Blockchain
 - Use a fully functioning distributed Application
- K. Mining, Proof of Work vs. Proof of Authority
 1. What is Mining in PoW?
- L. How blocks are generated
- M. PoW vs. PoA (vs. PoS)
 1. Understanding Go-Ethereum or Ganache/TestRPC for local development
 2. Understanding Private Blockchains vs. Public Blockchains
- Lab Tasks (Lab 10 Mining)
 - Installing and using Ganache
 - Installing and using Go-Ethereum
 - Connecting to Ganache/Go-Ethereum
- from Remix and Web3.js
 - Interact with the Blockchain from HTML/JS
- N. Current Problems, Solutions, Outlook, Serenity
 1. Ethereum Now and Ethereum Future
 2. Where we are at with Ethereum
- O. Homestead
- P. PoW
 1. Where Ethereum is heading to
- Q. Serenity
- R. PoS + PoW to PoS
- S. Sharding
 1. Recommended Newsletters/Groups
- T. Working in Teams, Testing and Versioning
- U. Understanding what Truffle is
- V. Comparison to Embark
- W. How Manage Code for Teams
- X. Understanding Migrations
- Y. Understanding Unit-Testing with Truffle
 - Lab Tasks (Lab 11 Truffle setup, Lab 12 Truffle Unit Testing)
 - Download and Setup Truffle
 - Adapt the standard Truffle-Project
 - Write A Unit Test
- Z. IPFS and distributed File-Storage
 1. What is IPFS
 2. Comparison between IPFS, FileCoin, Swarm, Sia, Storj
 - Lab Task (Lab 13 – IPFS)

- Install and work with IPFS
- Upload and retrieve a fully decentralized file
- AA. Bonus Section: Compilation
 - Lab Task (Lab 14 – Compilation)
 - Compile a Solidity File with a command-line compiler
