

## CCC Internet Of Things Foundation

---

### Course Summary

#### Description

The Cloud Credential Council (CCC) Internet of Things Foundation™ certification is a business-oriented, non-technical certification designed to develop a base-level understanding of IoT concepts, terminology, and associated business perspectives.

IoT is having a wide disruptive effect on how organizations transfer data in the early 21st century and its impact is expected to grow exponentially in the foreseeable future. Major technology companies such as Microsoft, Huawei, GE, Cisco, AT&T, Google, Fujitsu, and IBM have all recognized the great growth opportunities underlying IoT and invested accordingly. Driving improvements in productivity, increasing operational efficiency and developing new business models are only some of the promises of IoT. Obtaining IoT expertise has become a necessity rather than an option for any organization undergoing a rapid digital transformation journey. While there is an increasing demand for IoT skills and competences, only a few professionals can currently claim to know the fundamentals of IoT.

The industry-recognized CCC Internet of Things Foundation ensures you are ready to add value to organizations of diverse industries and dimensions. It does so through highly interactive and thought-provoking discussions which focus on:

- Group exploration and debates
- Lab exercises which allow learners to experience IoT applications
- Case study scenarios for IoT
- End of Module questions

Once the certification exam is passed, you are awarded a diploma and digital badge officially recognizing you have achieved the CCC Internet of Things Foundation certification and are now a member of the Cloud Credential Council's global community.
